

EVOLUTION

**2021** CATALOGUE

EVOLUTION

**Evolution represents the purest expression of refined technique and design for Airsoft.** Our purpose is to provide unforgettable and smooth experiences to the players.

We pride ourselves on always having the **playerbase in mind** to keep the development of new products always at the top.

The most performing and valuable Airsoft weapons in the world are the result of **Evolution's commitment in innovation.**

Evolution is innovation focused and new technologies development oriented. Our products are known all over the world due to their shooting performance and excellent workmanship.

# OUR STORY

EVOLUTION

Sergio Castelluccia

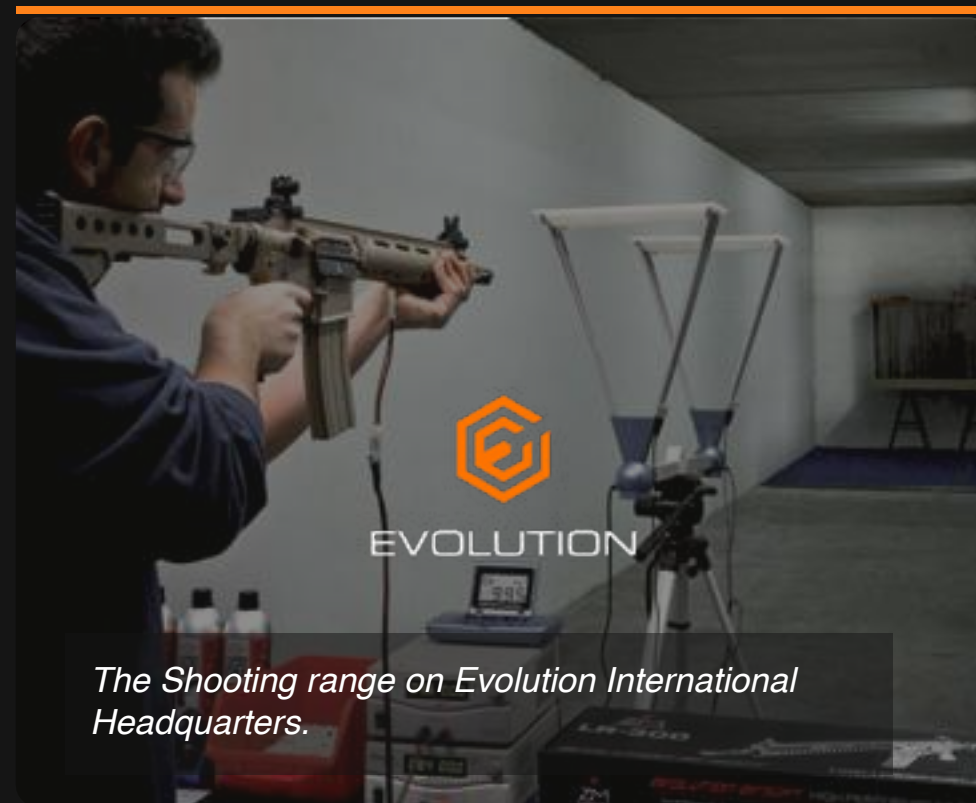

2009 - Handmade prototype of the LR300, back when 3D printing wasn't available.

Evolution International S.r.l. is the result of a passion born in 1996, year in which **Sergio Castelluccia**, one of the two founders, made of Airsoft his passion. Sergio was part of a very competitive and well known **Airsoft team**, which played at very high levels around Italy. Sergio created the first Italian online **Airsoft blog** which become very popular in those years.

After graduating at the University, Sergio decided to convert **his passion into a job** by involving the co-founder of Evolution in his activity: **Giovanni Castelluccia**, his father. The first intention was to make the Asian brands available on the European market, in a short time, Sergio gained the **exclusive distribution** of very important brands such as Classic Army, Systema and ICS.

Sergio's ambition, however, was to **create his own products**. So, he decided to gradually abandon distribution to devote himself to **production** focusing on those aspects that in his opinion were **neglected by other manufacturers**.

Evolution's path is guided by these core principles that have to be follow: **innovation, technological superiority** and **out of the box thinking**.

The Shooting range on Evolution International Headquarters.

Sergio Castelluccia during the early days of Evolution International developing a strategy during an airsoft game.

OVER 25 YEARS IN THE AIRSOFT BUSINESS

Sergio decided not to limit himself to the production of replicas but to **design his own rifles**: he hired a famous and specialized Italian real guns designer based in the near Valtrompia (the firearms valley) and started working side by side with him for several months. He developed from the ground up the **Ghost**, an original family of rifles with a very distinctive look **designed in house from scratch**.

Sergio's obsession as an Airsoft player wasn't just about the exterior of an AEG but also the **interior**: thanks to the big steps took in technological development, that made **miniaturized electronic components** available, it has been possible for Evolution International to start developing its electronic boards. They have gradually evolved up to the **ETS III** Configuration, which are Built-in in all the new Hard Core Series rifles giving freedom to the player to personalize the behaviour of the gun in **endless configurations**.

# WHAT WE DO

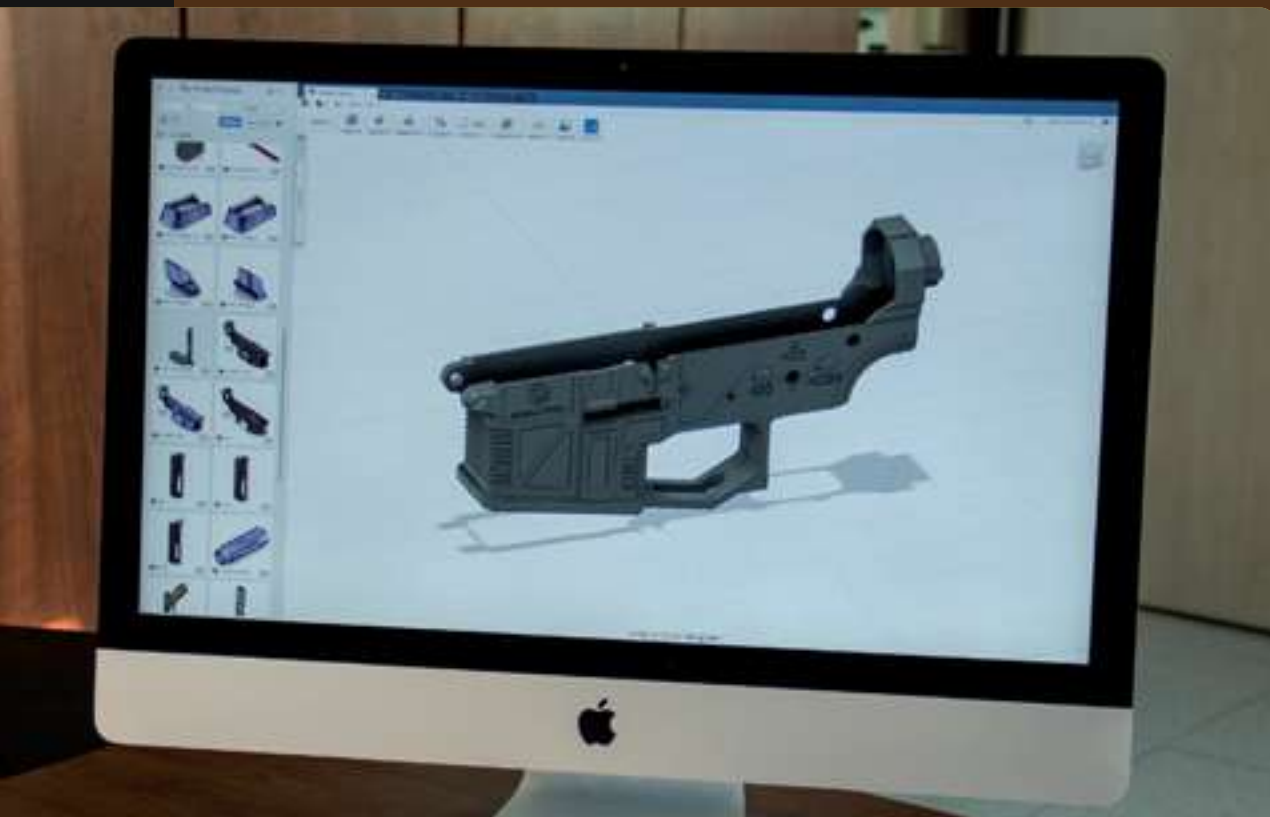

## ITALIAN DESIGN

Quality and design are in our DNA. We have a strong research and development team that leads us to find solutions enriched by a sophisticated design that ensures our products to be immediately recognizable.

## QUALITY & PROCESS

All guns go through a strict testing and inspection process in Italy. Every single function is verified by skilled technicians. The results of each gun are recorded in our database.

## INTERNATIONAL EXHIBITION

A huge part of Evolution International's marketing activities is dedicated to every year participation at International Exhibitions, to promote the Evolution Brand.

THE **EVOLUTION E.T.S.™** IS AN ADVANCED DEVICE USING **STATE OF THE ART** TECHNOLOGY COMPATIBLE WITH MOST V2 GEARBOXES WITHOUT THE NEED OF ANY MODIFICATION.

After several studies and modifications we released the 3rd E.T.S.™ generation which counts several hardware improvements and the very latest software (V5.2.3) run by our powerful CPU and supported by our Oversized Mosfet Unit™.

E.T.S.™ allows you to easily program how your gun will shoot. The software gives you endless possibilities, allowing you to personalize burst and trigger features.

Replacing your standard trigger with Evolution E.T.S.™ you'll say goodbye to burned switches problems thanks to our Oversized Mosfet Unit™ which, due to its optimized compact design, can be placed inside the buffer tube or the gearbox.

Furthermore E.T.S.™ keeps your Lipo battery safe: no more damages as a result of over-discharging. The E.T.S.™ incorporates a programmable Lipo Protection function through which you can protect 7.4V/11.1V/14.8V batteries.

E.T.S.™ can be sold as a complete unit with the Oversized Mosfet™. In case your gun already has a mosfet installed, our E.T.S.™ software is also capable to drive third party ones.

CONFIGURATION

#### E.T.S.™ ELECTRONIC TRIGGER SYSTEM

- Programmable burst 1-250 shots
- Digital trigger switch
- Digital cut-off sensor
- Digital safety
- Shortened trigger stroke
- Operating tension 7.4V - 14.8V
- Programmable Li-Po protection function 2-3-4 cells
- Compatible with any Mosfet

#### OVERSIZED MOSFET UNIT™

- Higher rate of fire
- Faster trigger response
- No battery drain
- Over engineered Mosfet Unit
- Compact size, can be placed inside the gear box
- Drop-in installation on most V2 gearboxes
- Operating tension 7.4V - 14.8V

THE E.T.S.™ HAS BEEN COMPLETELY **DESIGNED, MANUFACTURED AND QUALITY CONTROLLED IN ITALY**, AND AS A PREMIUM FEATURE IT COMES IN A MINI **CUSTOM HARD CASE**.

### SMART TRIGGER AUTO-BOOST

This function is automatically enabled when the PWM ROF CONTROL is active. The first shot is at full Voltage and the Rate of Fire reduction is applied only from the second BB. This produces a much faster trigger reaction and the best shooting experience.

### PRE-COCKING

You can choose 10 levels of spring pre-cocking. After each shot the piston will stop at the desired position pre-cocking the main spring. This produces a much faster reaction when the trigger is pulled.

### BURST MODE

With this function you can set a pre-determined numbers of BB's that will be shot for each trigger pull. You can set your gun to shoot from 1 to 10 BB's with 1 BB increments. You can choose the number you want, you don't have to stick to pre-set numbers. This function can be assigned to the SEMI and the AUTO position independently and a different value can be assigned to each of them, so you may want to shoot a different burst of BB's in SEMI (e.g. 3 BB's) and in AUTO (e.g. 10 BB's), you can also enable this function in SEMI position or AUTO position only.

### CONFIGURABLE FIRE SELECTOR

Assign independently to the SEMI and AUTO positions one or more functions for 10 different combinations, each of them programmable with independent values for a virtually infinite possibilities of different configurations:

- **SAFE - SEMI - AUTO**
- **SAFE - SEMI - SEMI**
- **SAFE - SEMI - BURST**
- **SAFE - SEMI - BURST/AUTO**
- **SAFE - SEMI/AUTO - AUTO**
- **SAFE - BURST/AUTO - AUTO**
- **SAFE - BURST/AUTO - BURST**
- **SAFE - BURST/AUTO - BURST/AUTO**
- **SAFE - BURST - BURST**
- **SAFE - BURST - AUTO**

### ADJUSTABLE TRIGGER RESPONSE

Feel the trigger like a real one. This function speeds up the trigger response and shortens the time between trigger pull and BB departure. The gun will be more reactive and you will gain a competitive advantage. The 10 levels of pre-cocking adjustments allow to find your preferred setting for a crisp, immediate and more reactive trigger response.

### RAMPING

This function can be enabled in SEMI and AUTO positions while shooting Semiauto or Burst. With the Ramping function active the gun will switch automatically to Full Auto if the trigger is kept pulled after the last shot. If you are shooting Semiauto after the shot, the gun will switch to Full Auto. If you are shooting a Burst, after the last shot the gun will switch to Full Auto. You can set 10 different levels of delay between the last Semiauto or Burst shot and the first Full Auto shot.

### ACTIVE BRAKE

This function uses the motor as a powerful electromagnetic brake. The breaking power is adjustable on 5 levels and can be deactivated. This function is very useful with high Voltage batteries to avoid double shots, while shooting Semiauto, as well as with the unwanted fire of one or more shots after releasing the trigger while shooting in Full Auto or Burst. This is a very common problem with high voltage batteries and can be totally avoided with the Active Brake function.

### AUTO LIPO, LIFE AND VOLTAGE DETECTION

The microprocessor automatically recognizes the type of battery used and its voltage. You can freely switch between LiPO and LIFE batteries and different voltage without having to deal with change of settings to re-configure the unit for a new battery.

### FULL CYCLE CONTROL

The sensor behind the sector gear counts precisely the number of gear rotations. When this function is active the gears always complete a cycle even if the trigger is released. If you are shooting Semiauto the gun will complete the shooting cycle even if you apply to the trigger a very limited pressure. If you are shooting in Burst Mode the gun will fire the complete burst even if you release the trigger.

### LOW BATTERY WARNING

A battery over-dischargetment can damage it and be dangerous. While low battery warning function is active, once the voltage drops behind the safe level, the gun will warn you producing vibration any time you shoot. You can set Standard and High protection levels or No protection.

### PWM ROF CONTROL

When using high voltage batteries the Rate of Fire may be excessive. That may damage your gun or it may be just unrealistic. With this function you can reduce the Rate of Fire on 4 levels to obtain your desired ROF. Feel free to use any tipe of battery.

### BATTERY FAILSAFE

This function is automatically activated when the Low Battery Warning is enabled. To avoid an over-dischargetment that may damage the battery, the Battery Failsafe function cuts the power if the battery voltage drops further after a number of unattended low battery warnings. You can set Standard and High protection levels or No protection.

# THE HARD CORE SERIES

Hard Core series is focused on superior quality products to satisfy professional airsoft players who are looking for performance and ultimate realism. Thanks to its sophisticated technical features, perfect material finishing and attention to details, Hard Core includes the most advanced items in the airsoft industry. Top performance, super realistic airsoft guns designed for the professional users.

**TOP PERFORMANCE, TECHNICALLY  
ADVANCED AIRSOFT GUNS DESIGNED  
FOR THE PROFESSIONAL USERS.**

**HARD CORE**

## HARD CORE / ETS

THE E.T.S. III™ IS THE MOST ADVANCED PROGRAMMABLE ELECTRONIC TRIGGER EVER INSTALLED IN A STOCK AIR SOFT GUN AND IT IS THE EASIEST TO USE.

While other manufacturers install electronic units with very limited basic functions and require to buy additional software to unlock the advanced functions, using PC or apps to program them, the E.T.S. III™ have all the advanced functions out of the box, all you need is your finger as all functions, even the most advanced ones, are programmed via trigger. Fast and easy!

# TangoDown

EVOLUTION HAS ENTERED IN A WORLDWIDE EXCLUSIVE LICENSING AGREEMENT WITH **TANGODOWN®** INC. AND IS PROUD TO BRING TO THE AIR SOFT WORLD THE TANGODOWN **ECR**'S REPLICAS (ENHANCED COMBAT RIFLE).

## GEARBOX

With the TangoDown ECR series Evolution introduces a new type of gearbox in their products line. It comes standard with an Integrated Mosfet Unit and Quick Removable Spring Guide, which is accessible in seconds by simply removing the buffer tube, allowing the immediate access to the main spring without the need of taking out the gearbox from the receiver.

**TangoDown® Inc.** boasts over ten of years the highest quality products to **United States Armed Forces** and **Law Enforcement**.

TangoDown's reputation for unique weapon components' **design** and **quality** made them **first choice** when it comes to stepping into arms way.

Their goal consists in making warrior's weapon **lighter** and **more efficient**, whether it's a pistol, carbine or belt fed machine gun.

## BUILT-IN MOSFET UNIT

The Mosfet Unit increases the duration and reliability of the trigger switch, removing every problem caused by the "electric arc", which is typical issue of standard trigger unit designs. The more efficient electric flow management increases the Rate of Fire.

As it is standard on every Evolution gun all internal components are pre-upgraded. All key parts - like the outer barrel - are made of one piece CNC machined from billet. When it comes to Evolution TangoDown's series, the realism and attention to details is pushed to the next level.

THE **EVOLUTION LR-300** IS THE OFFICIAL AIRSOFT REPLICA OF THE REAL LR-300 PRODUCED UNDER WORLDWIDE EXCLUSIVE LICENSE.

## GEARBOX LR-300

The Evolution Hardcore Series LR-300 is equipped with a mechanically advanced reinforced gearbox. It's based on a patented design with the extra addition of the strongest and most durable piston today available, featuring steel metal teeth for unmatched durability under high-stress conditions. The reinforced steel gears run on strong and durable oversized 9mm steel ball bearings and a new designed tappet plate ensures smooth operation at high rate of fire.

## RDS STOCK

The stock smooth action has been faithfully reproduced allowing to unfold it using just one hand. This feature grants a tactical carry of a very compact gun and a rapid one-hand unfolding movement in case of immediate action and rapid target acquisition. The LR-300 RDS stock is fully foldable and five length positions adjustable, making the LR-300 the most versatile AR style gun ever made.

**HARD CORE**

LR-300

## ELECTRIC BLOWBACK

In order to make possible the use of a fully folding stock on an AR style rifle, Z-M Weapons modified the traditional Stoner design shortening the bolt-carrier and relocating the recoil spring over the barrel, allowing to completely remove the buffer tube (DIGS System). This feature has been fully replicated in the Evolution LR-

300 featuring a working replica of the DIGS System, which is integral part of the electric powered Blowback System. During the blowback action the bolt carrier, the gas-system and recoil spring placed over the barrel, add an unparalleled realism. The Blowback System is two positions adjustable for two levels of recoil intensity and rate of fire. In the LR-300 the realism is pushed to the ultimate level, so that the field-strip system of the blowback mechanism has been fully replicated allowing the user to access and disassemble it just like the real gun.

# THE COMBAT SERIES

The Combat Series rifles are the best choice for those wargame players looking for reliable, performing, complete and affordable products.

The Combat Series rifles have right out of the box what the other brands sell as "upgrades" or "option parts". This series is characterized by guns with heavy-duty gearbox - featuring a reinforced piston with all teeth made out of steel, steel gears with delayer, a real Quick Access spring guide that allows you to swap the main spring in seconds.

Don't be surprised to find in these guns a heavy-duty gearbox with a reinforced piston with all teeth made out of steel, steel gears with delayer, a real Quick Access spring guide that allows to swap the main spring in seconds, in order to easily adapt the shooting performance to the game as well as the revolutionary tool-less access to the motor compartment and other innovations such as the very accurate rotary hop up chamber.

CARBONTECH™ AIRSOFT GUNS

ENTIRELY DESIGNED IN GARDONE VALTROMPIA, ITALY - THE FIREARMS VALLEY WHERE THE **MOST PRESTIGIOUS ITALIAN FIREARM** MANUFACTURES ARE BASED - BY ONE OF THE MOST EXPERTS REAL GUN DESIGNERS SIDE BY SIDE WITH EVOLUTION INTERNATIONAL. THE GHOST DOESN'T HAVE EQUALS ON THE MARKET IN TERMS OF **DESIGN, TECHNOLOGY** AND **TECHNICAL FEATURES**.

It was presented as a concept at IWA2019 where it captured the attention of the airsoft industry, now the GHOST it's ready to change the rules of the game.

A real unique design that incorporates the mission and vision of the Evolution brand.

## ELECTROMAGNETIC CORE

The GHOST incorporates an ETU (Electronic Trigger Unit) with electromagnetic sensors. Equipped with a powerful Active Brake, Full Cycle Control and a sophisticated Battery Protection System, the ETU ensures a superior performance under any conditions.

## EMR™ EVOLUTION MODULAR RAIL

The EMR - Evolution Modular Rail - is the superlight-weight handguard designed in Italy by Evolution International made by CNC Machined billed aluminium and M-LOK compatible.

## CARBONTECH™

### ULTRALITE BODY

The ultralight body has been designed in Italy by Evolution International and it's made of Carbontech, a space-age engineering technopolymer, for a super durable construction with the lowest weight possible.

A detailed black and white photograph of an EG6 airsoft rifle, shown from a side profile. The rifle features a long barrel, a top rail with various attachments, and a distinctive stock design. The background is dark, making the rifle stand out.

# EG 6

THE EG6 IS THE ACCESS POINT TO THE EVOLUTION  
WORLD.

The new EG6 is the access point to the Evolution world but, in spite of its price, it is equipped with several features like: Quick Spring Change System, Micro Switch Trigger, Reinforced Gears and a 450 BB Magazine. The combination of high quality and low price of the EG6 outperform any kind of competition in this airsoft guns category.

MADE IN ITALY

# ACCESSORIES

The best accessories for your rifle are made by Evolution with care and professionalism, to maximise your airsoft activity.

EVOLUTION

# HARD CASES

THE EVOLUTION HARD CASES ARE **MADE IN ITALY** USING THE MOST **ADVANCED** MACHINERY AND HIGH STRENGTH **POLYMERS** TO ENSURE THE HIGHEST LEVEL OF **PROTECTION** UNDER ANY CONDITION.

DOUBLE LAYER OF  
SHOCK-ABSORBING  
FOAM

MADE OF HIGH  
STRENGTH  
POLYMERS

IATA APPROVED

Certifications by:  
ITALIAN NAVY •  
INTERNATIONAL POLICE  
• FORCE • NATO

## DOUBLE LAYER SHOCK-ABSORBING FOAM

### KEEP YOUR GEAR PROTECTED

Each rifle case was created to protect the gun and the accessories inside with a double layer of shock-absorbing foam. The foam keeps the guns and accessories in place when moving, preventing damage and scratches.

The larger cases have four different locking points and a protected name tag to personalize it. The smaller ones have two locking points in the centre with a name tag too.

## PISTOL HARD CASES

### PROTECT EVERY GUN

Made of the same material and with the same quality as the rifle cases, the pistols one's deserve to be on every player's arsenal. Carry your gun safely and easily, knowing the quality of Evolution is always by your side. With many version to choose from and the security of double layer of shock-absorbing foam inside, your equipment will always be safe.

## HIGH STRENGTH POLYMERS

### SUPERIOR BUILD QUALITY

The rifle cases are easy to carry and durable thanks to the special material they are made of: a particular type of impact resistant polypropylene with a satin texture.

The Evolution Rifle Hard Cases are made in Italy using the most advanced machinery and high strength impact resistant polymers to ensure the highest level of protection under any condition. Whether a real firearm or just an air soft gun with the Evolution Hard Cases your gun is always in the safest place.

# HARD CASES / Rifles

The new rifle cases are signed with our Evolution logo as a guarantee of quality. They are available in various sizes and in two different colors: black and tan version.

Mag. M4-M16 - Tan

PARTS & ACCESSORIES

The new Evolution

LIPO BATTERIES

ULTRA POWER

Among its wide range of products, Evolution International released its line of ultrapowered batteries, characterized by high performance and designed for those player who don't need juts a battery but require a top performance in any situation. This new range includes batteries of multiple sizes, shapes and configurations in order to fit any airsoft gun in the market.

Powerful! The new 7.4V and 11.4V LiPro Batteries feature compact dimensions but at the same time are very powerful thanks to the high power density.

With their 40 C peak discharge they can instantly deliver the current demanded by any type of motor, even on super tuned air soft guns.
