## EVOLUTION

ITALIAN AIRSOFT EXCELLENCE

Evolution represents the purest expression of refined engineering and design in the Airsoft world. Our mission is to deliver smooth, unforgettable experiences to every player.

We always keep the community at the heart of our work, ensuring that each new product is developed to meet the highest standards of performance and quality.

The world's most advanced and high-value Airsoft replicas are the result of Evolution's dedication to continuous innovation. Our strong focus on new technologies development and product excellence has made our Airsoft guns renowned worldwide for their outstanding shooting performance and superior craftsmanship.

# OUR STORY

Evolution International S.r.l. was born from a passion that began in 1996, when Sergio Castelluccia - today one of the company's two founders - discovered Airsoft and made it his world. At the time, Sergio was an active member of a highly competitive and well-known Airsoft team that played at top levels across Italy. He also created the first Italian online Airsoft blog, which quickly became extremely popular.

After graduating from university, Sergio decided to transform his passion into a profession, involving the future co-founder of Evolution - his father, Giovanni Castelluccia. The initial goal was to bring Asian Airsoft brands to the European market. In a short time, Sergio secured the

exclusive distribution of major brands such as Classic Army, Systema, and ICS among others.

However, Sergio's ambition went far beyond distribution. He wanted to create his own products. Gradually, he shifted the company's focus from distributing to manufacturing, concentrating on aspects he believed were overlooked by other producers.

Evolution's journey has always been driven by three core principles: innovation, technological superiority, and out-of-the-box thinking.

In 2018, a new milestone was added to Evolution International's growth path with the release of its first airsoft gun entirely developed in-house: the iconic LR-300, designed using the original firearm blueprints. Determined not to limit himself to manufacturing replicas of existing firearms, Sergio set out to design proprietary rifles: the Ghost is a completely original family of rifles with a distinctive, in-house

*Sergio Castelluccia during the early days of Evolution International developing a strategy during an airsoft game.*

*2009 - Handmade prototype of the LR-300, back when 3D printing wasn't available.*

*Shooting range at Evolution International Headquarters. Testing the LR-300, the first airsoft gun made by Evolution*

## OVER 25 YEARS IN THE AIRSOFT BUSINESS

design created from the ground up. Today, Sergio personally designs all new products, starting from an initial concept sketched on paper and developing it into full 3D CAD models. The Ghost 3.0, the Reaper, and the Recon 3.0 are among his creations. His focus is on seamlessly blending design and functionality, producing items that are not only visually distinctive but also equipped with additional features - such as the customizable Matrixx™ magazine and the Cargo Stock, which now equips Evolution's top-tier models.

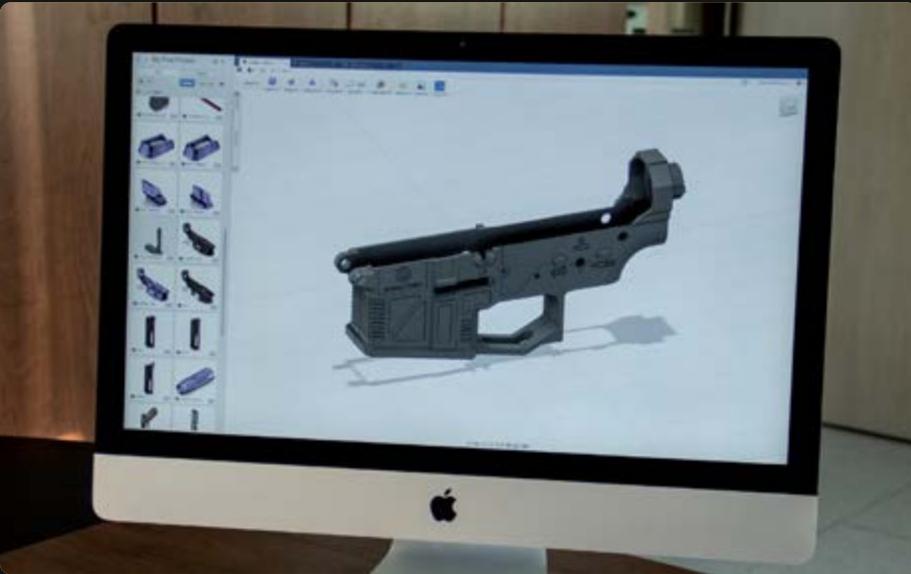

Sergio's dedication as an Airsoft player extended far beyond external aesthetics—his true obsession was the internal performance of an AEG. Thanks to major advancements in technological miniaturization, Evolution International began developing its own electronic boards. These systems have evolved over time into the ETS II and ETS III configurations, and today we have reached the IV generation, called Viper™.

# WHAT WE DO

## ITALIAN DESIGN

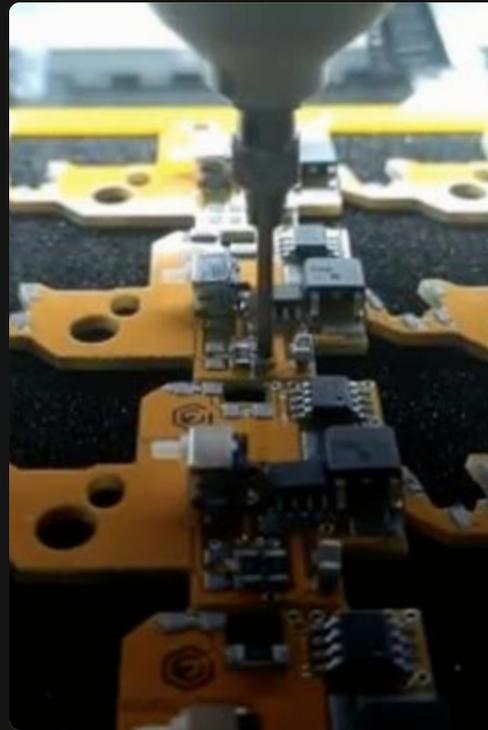

Quality and design are in our DNA. We have a strong research and development team that leads us to find solutions enriched by a sophisticated design that ensures our products to be immediately recognizable.

## QUALITY & PROCESS

All guns go through a strict testing and inspection process in Italy. Every single function is verified by skilled technicians. The results of each gun are recorded in our database.

## ASSEMBLY LINE IN ITALY

# WHAT WE DO

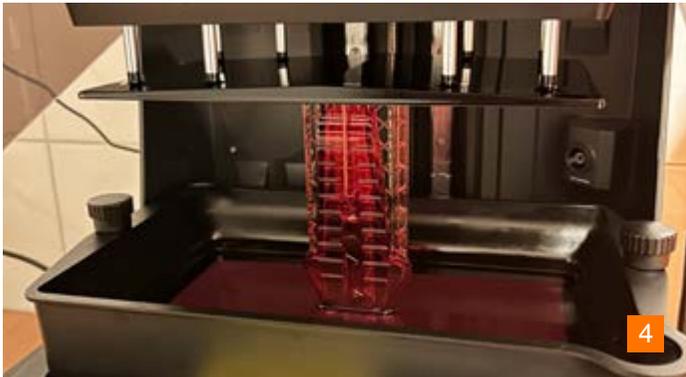

1

2

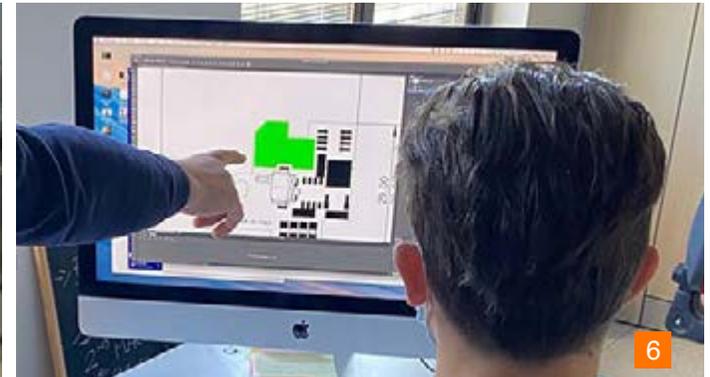

3

4

5

6

## 1 DESIGN FROM SCRATCH

The Design process starts the old good way: with paper, pencil and ruler.

## 4 3D PRINTING

Rapid prototypes are made using the most advanced 3D printing technology.

## 2 TOLERANCE

Tolerances are calculated carefully to ensure smooth operation and compatibility.

## 5 VERIFICATION

Measures and tolerances are checked on 3D prototypes before on-field tests and mass production.

## 3 3D DESIGN

The initial scratch is converted into a 3D CAD model.

## 6 ELECTRONIC UNIT DESIGN

Hardware and software development.

# VIPER

## Electronic Trigger

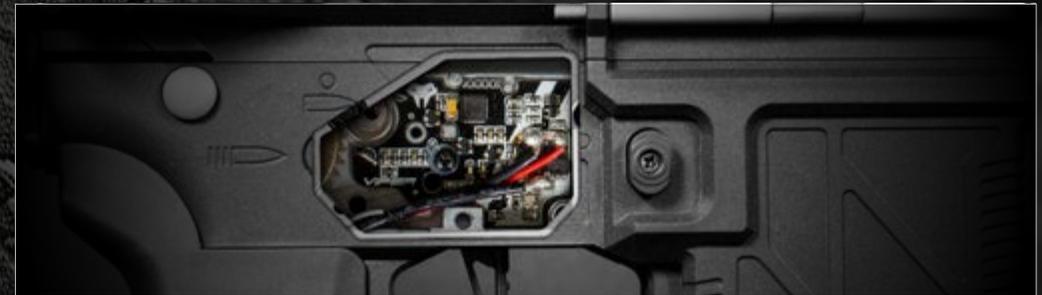

designed for those who seek real performance

VIPER™ Electronic Trigger - Engineered in Italy

The Viper™ is designed to integrate seamlessly into V2 gearbox-compatible replicas, providing a solid platform for:

- High Performance Upgrades
- Custom Builds
- Competitive-level play

The hybrid sensor architecture combines magnetic and next-gen optical sensors to ensure maximum operational reliability under any condition. The Magnetic sensors are used in critical areas, where standard optical sensors often fail (dirt, dust, moisture, reflections) and high precision Optical sensors are used for ultra-fast response, suitable for extreme rate of fire (40+ BB/s).

## RECON 3.0

SMART  
AIRSOFT  
GUN

The Recon 3.0 line is engineered to deliver high performance, precision, and absolute reliability. Entirely designed in Italy, the Recon 3.0 is built for the most demanding players who expect the best from their gear in every game scenario – from CQB to the toughest and most extreme outdoor operations.

**VIPER Electronic Trigger™** – designed for those who seek real performance

At the heart of the Recon 3.0 platform lies the +new ETS IV VIPER™ electronic trigger, offering advanced fire control management. Unlike other ETU systems, the VIPER is fully integrated and does not require apps or external connections for programming – all settings are managed directly through the trigger in a fast and intuitive way, even during gameplay.

# MATRIX MAG

## THE MOST VERSATILE MAGAZINE ON THE PLANET.

Matrixx Mag™ is the most versatile magazine on the planet. Its surface features a dense, precision-engineered matrix of micro-points that allows complete customization of the magazine's exterior.

This unique grid can be used for identification through numbers or symbols, or simply to unleash creativity. Customization is easy; fill the recessed points to create any pattern or marking. Once applied, the coloring is long-lasting and scratch-resistant.

The specialized point matrix also delivers exceptional grip on both sides of the magazine across a broad contact area, ensuring secure handling even while wearing gloves. A pronounced front groove provides an additional anchor point for rapid extraction in demanding conditions.

A minimalist, streamlined design enhances smooth insertion and removal from magazine pouches and other retention systems.

Built from advanced Carbontech™ techno-polymer, the Matrixx Mag™ is exceptionally strong, durable, and engineered to perform.

Evolution

## LIPO BATTERIES ULTRA POWER

Perfect for Brushed and Brushless motors. Characterized by high performance and designed for those player who don't need just a battery but require top performance in any situation. This new range includes batteries of multiple sizes, shapes and configurations in order to fit any airsoft gun in the market. Powerful! The new 7.4V and 11.1V LiPo Batteries feature compact dimensions but at the same time are very powerful thanks to the high power density. With their 40 C peak discharge they can instantly deliver the current demanded by any type of motor, even on super tuned air soft guns.

LiPo Batteries

# BATTERIES

The new Evolution

## LITHIUM ION BATTERIES

The Evolution Lithium Ion batteries offer some advantages over Li-Po (Lithium Polymer) batteries when used in airsoft replicas.

Here is a comparison of the main advantages of Li-Ion batteries over Li-Po:

### HIGH DISCHARGE RATE

Lithium-ion batteries tend to have a higher discharge rate than Li-Po batteries. They offer better performance.

### HIGHER ENERGY CAPACITY

For the same size, Li-Ion batteries offer a higher energy density, meaning they can store more energy, allowing them to power a replica for longer than a similarly sized Li-Po battery. This is an advantage for airsoft players who need long life without having to change batteries.

### GREATER SAFETY

Li-Ion batteries are generally more stable and safer than Li-Po. Li-Po batteries require more maintenance, as they can swell or explode if improperly charged or discharged. Li-Ion, on the other hand, is less prone to these issues and offers greater safety during use and charging.

### LESS MAINTANCE

Li-Ion batteries require less maintenance than Li-Po. Li-Po batteries must be carefully monitored to ensure they do not over-discharge or swell, and must be charged at specific voltages to prevent damage. Li-Ion batteries are more tolerant to voltage and discharge variations, making them easier for users to handle.

### LONGER LIFE

Li-Ion batteries tend to have a longer lifespan than Li-Po. They are more resistant to degradation over time and the number of charge cycles, offering greater longevity, which means less frequent battery replacement.

### TEMPERATURE RESISTANCE

Li-Ion batteries tend to perform better at lower temperatures than Li-Po batteries. This can be an advantage for those playing outdoors in cold weather, where Li-Po batteries may suffer from performance degradation or deterioration more quickly.
